

The City of Springfield has organized a Task Force to begin considering Stormwater Management moving forward. This process will include:

- The development of a Stormwater Ordinance and all that may come with that.
- Mapping the stormwater system in order to develop a Stormwater Model.
- Development of a Stormwater model that will expose issues and choke points.
- Develop a corrective action plan.
- Develop a financial model to assist in paying for the corrections.

Please know that this is a long-term process and will not be done overnight. It will be slow and methodical and will concentrate on the worst places as the model tells us.

The bulk of the existing storm system was built 75 years ago and is just too small (undersized hydraulically) for the town as we now know it.

One of the initial items of business will be a survey to determine where the public sees drainage issues related to their own property and location.

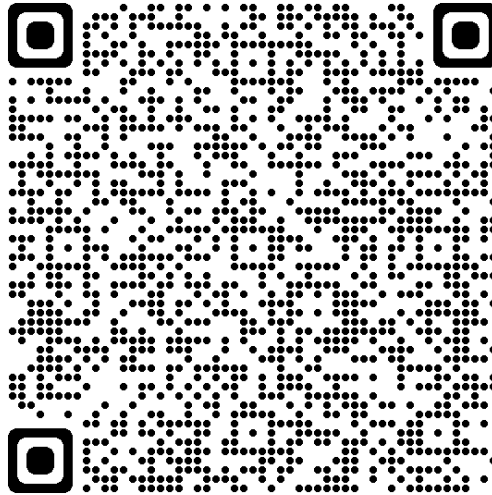

If you reside in the City Limits, PLEASE participate in this survey.

The survey links and/or QR codes are contained on page 2.

The Stormwater Task Force thanks you for your participation.

The Stormwater Management Team seeks your input related to property and any stormwater issues that you feel affect YOUR PROPERTY. Please click the link below OR scan the barcode to take the GENERAL Stormwater Survey.

In addition, there is also a SPECIFIC survey form for the rain event that occurred on July 18th. PLEASE fill this out even if you were unaffected by that heavy rain event. Please use July 18 as the rain event date in this survey.
